

SATATYA FEATURE UPDATE

Feature:

Email with Snapshot

Why: Internet connectivity and bandwidth availability are still some of the major concerns for centralized monitoring at remote locations. Getting a text message in case of an event is an outdated feature, as snapshots and videos still need to be pulled out from the system for further investigation. Sending pictorial notification to the central location or to the concerned person in real-time is a challenging task. This is a very convenient situation for thieves and burglars. They are smart enough not to leave any proof at the targeted location, damaging cameras and NVRs completely. Consequently, there will be lack of pictorial evidence and data which is fundamental for the reimbursement of a claim from an insurance company. To address this issue, Matrix Video Surveillance solution has developed a smart feature called 'Email with Snapshot'.

Feature Description: This feature enables the Video Surveillance solution to send emails with snapshots at a low bandwidth on a pre-configured email, as soon as a threat or tampering is detected in the functioning of cameras or recorders. Email with Snapshot can also be used for other events like Motion Detection, Video Loss, Face Detection, etc. For example, a branch office of a bank in a rural area can send an email with snapshots to the central location with low bandwidth if motion is detected after office hours. With the help of these snapshots the concerned person at the central location can take necessary preventive measures. This feature can be configured to send 1-60 snapshots in a minute, as per the requirement.

Benefit: With 'Email with Snapshots' get notifications (in the form of snapshots) at the central location at a minimum bandwidth and have pictorial evidence of the event or theft even when cameras and recorders are damaged.

MATRIX VIDEO SURVEILLANCE
brings **E-MAIL WITH SNAPSHOT!**
Receive snapshots immediately
over mail and safeguard evidence.

Application: This feature can be used effectively at locations having less bandwidth availability. It is advantageous at locations like remote banks, ATM centres and financial firms, which are prone to thefts and robberies.

Version: Matrix SATATYA NVR V1R1
Matrix SATATYA SAMAS V1R1

Product: SATATYA NVR
SATATYA SAMAS
